LNA Nova 2.0:
Improvements to
Scalability

May 2026

LNA Nova 2.0: Improvements to Scalability

Executive Summary

- The LNA Nova agent (Agentforce Sales Development Rep) currently has 4 topics & deployed in very short duration into **Production**.
- Today, only **Initial Outreach** follows the Prompt Builder pattern.
- The remaining 3 topics (**Follow-up Outreach, Meeting Response, Manage Opt-Out**) - followed the out-of-the-box lead nurturing approach using instruction-based logic.
- Currently, Initial Outreach emails are hardcoded to use UK-English spellings in both the instructions & the prompt template.

Gap	Risk	Example
Locale-aware spelling	LLMs are unreliable at consistently applying spelling rules, especially for subtle differences eg: UK-English vs US-English	Today all emails are hardcoded to UK-English spelling. eg: "organisation" regardless of country
No spelling directive	The Follow-up Outreach, Meeting Response & Manage Opt-Out topic instructions contain no spelling directive at all.	The planner defaults to whatever it prefers
Reduced determinism	Planner must recall & predict exact picklist values	Using the Unqualify Reason "Not Interested" instead of "Customer Not Interested" → potential automation failures
High maintenance cost	Editing XML topic instructions requires full reDeployment	No version control, no prompt iteration
Scaling difficulties	New locale/language → rewrite topic instructions	Maintaining Instructions are harder to manage & reuse

THE ASK

Approve on the Scaled Design approach to migrate remaining 3 topics to the Prompt Builder framework (including Flow Patterns), incorporating locale-aware spelling (UK + US English) & establishing a scalable foundation for future agent expansion.

Topic-by-Topic Review

Initial Outreach (Reference Pattern)

- **Instructions:** 2 (Purpose + Guardrails) — minimal
- **Actions:** 1 flow (LNA_Nova_Initial_Outreach)
- **Prompt Builder:** YES — flow calls LNA_Nova_Lead_Persona_Detection then LNA_Nova_Outreach_Email
- **Record Updates:** Flow updates Lead Status to "Outreach"
- **Language:** English (UK spelling only)

Follow-up Outreach (Needs ReEngineering)

- **Instructions:** 6 (role-aware reframing, output format, reframe strategy, final message override, tone rules, guardrails)
- **Actions:** 1 (Standard - Get Record Details)
- **Prompt Builder:** NO — Sub-Agent Instructions
- **Record Updates:** None
- **Language:** English (UK spelling only)

Meeting Response (Needs ReEngineering)

- **Instructions:** 7 (read reply + get details, acknowledge + seller connect, meeting link formatting, output format, tone rules, mandatory update action, guardrails)
- **Actions:** 2 (Get Record Details, LNA Nova - Update Lead Record)
- **Prompt Builder:** NO — Sub-Agent Instructions
- **Record Updates:** YES - LNA Nova - Update Lead Record
- **Language:** English (UK spelling only)

Manage Opt-out (Needs ReEngineering)

- **Instructions:** 6 (classify reply, response templates per class, output format, tone rules, mandatory update with exact field values, guardrails)
- **Actions:** 1 (LNA Nova - Update Lead Record)
- **Prompt Builder:** NO — Sub-Agent Instructions
- **Record Updates:** YES - LNA Nova - Update Lead Record
- **Language:** English (UK spelling only)

Assessment: This is the target pattern. Topic tells agent what to do; flow + templates handle how.

Recommended Target Architecture

Consistent Pattern: Topic → Flow → Prompt Template

TOPIC

Scope & Guardrails

Separation of Concerns: 2 instructions (keep it minimal)

- What to do
- Guardrails

Planner decides:

WHAT & WHEN, but not HOW

Planner simplicity:

Reduce each topic to: understand the task → invoke one flow action → return the result.

FLOW

Deterministic: Orchestration & Updates

1. Get Lead (+Country)
2. Resolve Locale
3. Call Prompt Template
4. Update records
5. Return email

Get Lead Record (with Country field)

Decision: Resolve Locale

Country (US)
Default

→ Assign varSpellingLocale = "US"
→ Assign varSpellingLocale = "UK"

Call Prompt Template (Spelling-Locale = varSpellingLocale)

PROMPT TEMPLATE

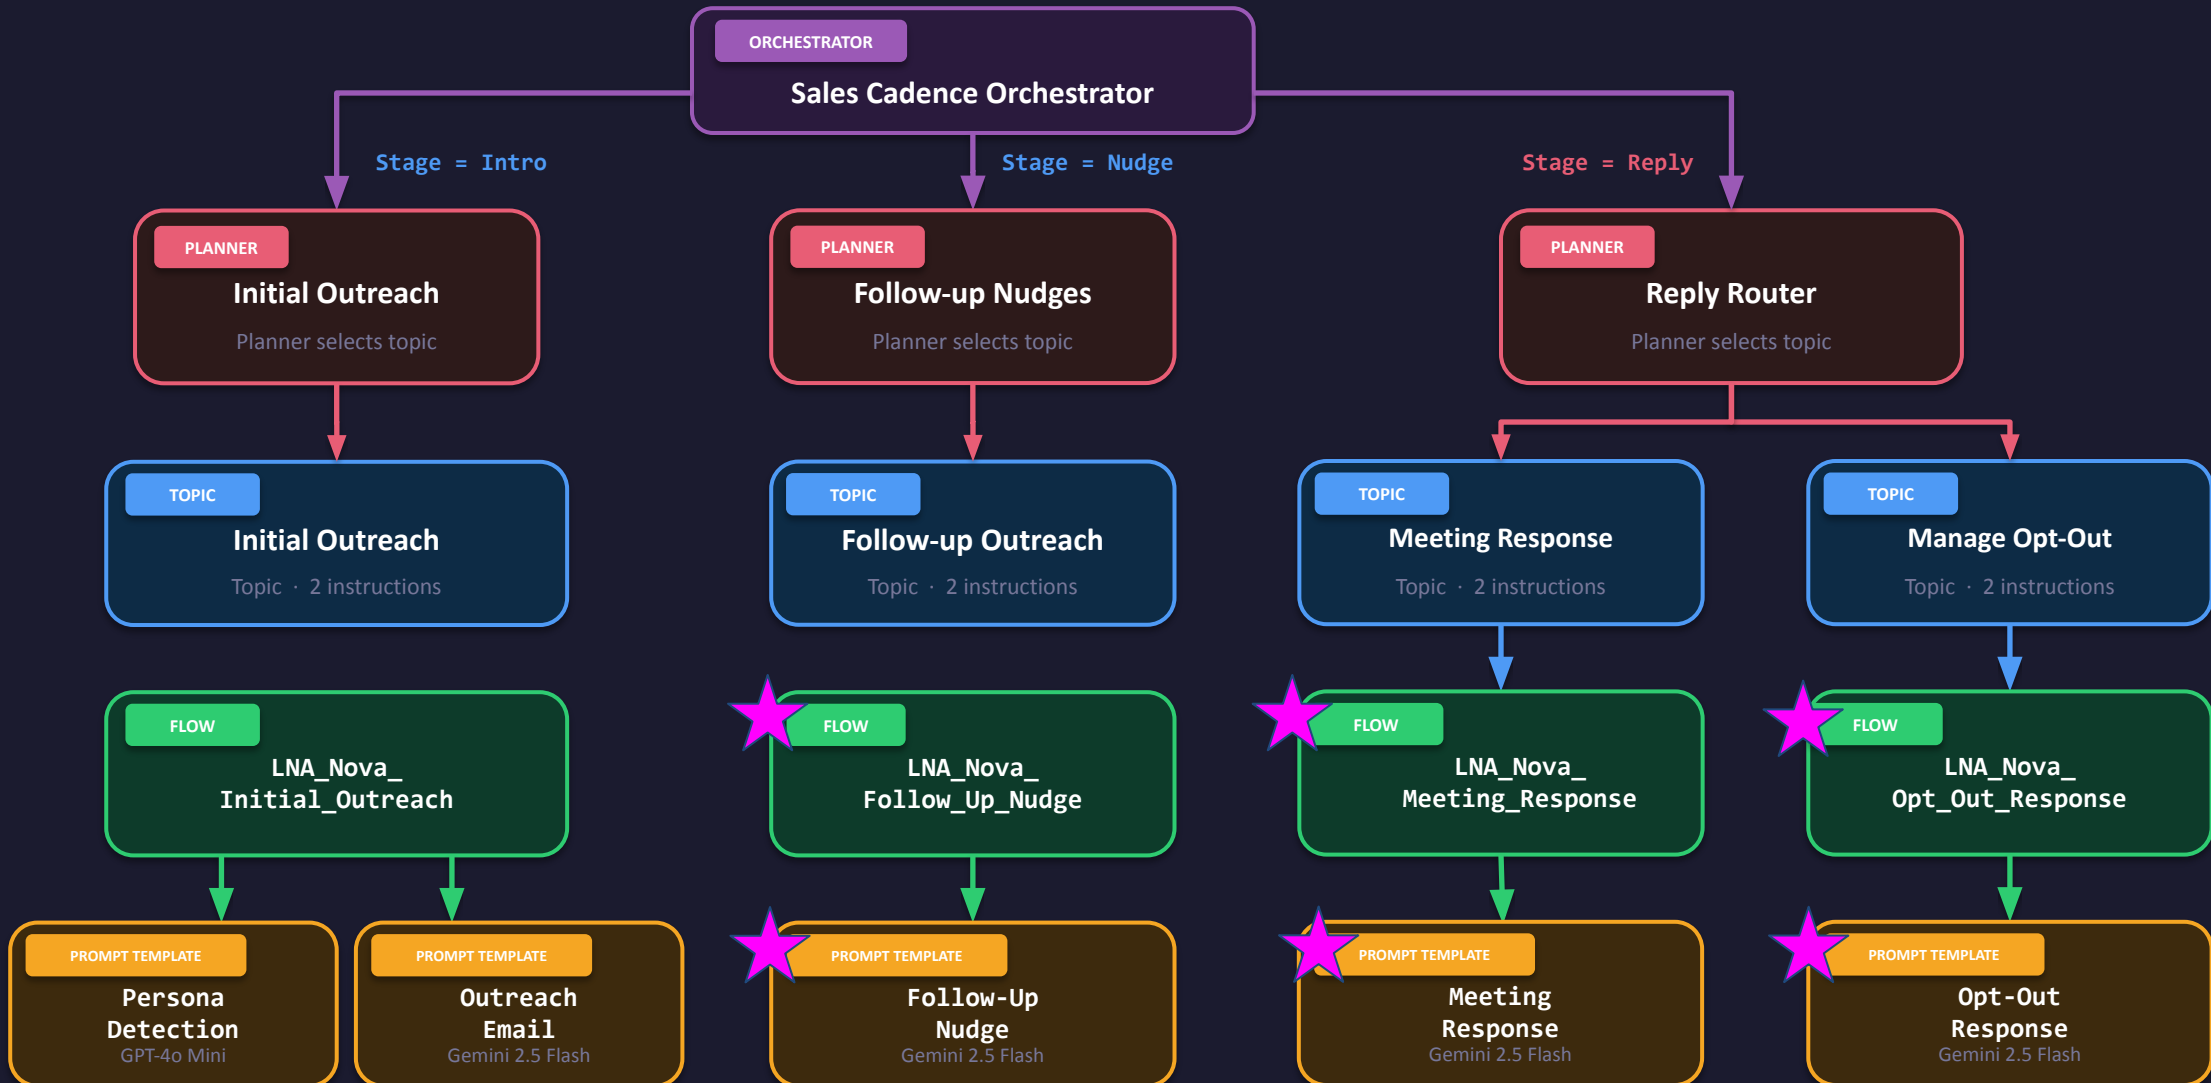

Generation & Personalisation

Full generation logic
Dynamic Spelling-Locale input (No hardcoded spelling directives anywhere.)

LLM decides HOW

Target Architecture Diagram

Prompt Template pattern for all 4 cadence stages

What Changes

Component	Current State	Re-Engineered State
Topic Instructions	21 instructions (~8,000 words in XML)	8 instructions (~800 words — scope + guardrails)
Prompt Builder Templates	2 (Persona Detection + Outreach Email)	5 (+Follow-Up Nudge, Meeting Response, Opt-Out)
Orchestration Flows	1 (Initial Outreach)	4 (+Follow-Up Nudge, Meeting Response, Opt-Out)
Record Update Logic	Reduced determinism	100% in Flows (fully deterministic)
Spelling Locales	1 (UK only, hardcoded)	2 (UK + US) - dynamic per Lead data. * This will also allow to scale to multi-language/Region expansion.

New Deliverables (US & UK Agent only)

Initial Outreach (Reference Pattern)

- Spelling Locale within the existing PT (Prompt Template)

★ Follow-up Outreach (Needs ReEngineering)

- **Type:** Prompt Template + Flow
- Scope: Migrate **6** topic instructions → **1** PT
- Spelling Locale within PT

★ Meeting Response (Needs ReEngineering)

- **Type:** Prompt Template + Flow
- Scope: Migrate **7** topic instructions → **1** PT
- Spelling Locale within PT

★ Manage Opt-out (Needs ReEngineering)

- **Type:** Prompt Template + Flow + Branching
- Scope: Migrate **6** topic instructions → **1** PT + Classification.
- Spelling Locale within PT

Return on Investment & Scale Readiness

Immediate Impact

Benefit	Impact
US market readiness	US lead outreach without manual editing
Increased Determinism	Zero picklist value prediction errors
Iteration speed	Decoupled deployment of agent and Prompt Templates
Maintenance	Same Action structure (Flow and PT) across all Sub-Agents
Flex Credit Consumption	Additional Prompt templates will be required, which will increase Flex Credit consumption

Architecture Maturity

CURRENT

- This decision was deliberately made to ensure the V1 Speedboat deployment was delivered on-time & within budget.
- Hybrid & not streamlined
- UK-only (hardcoded spelling) - only for Initial Outreach Emails
- 1 of 4 topics uses Prompt Builder

NOVA 2.0: ENHANCED

- Streamlined Architecture
- Deterministic (Flow orchestration)
- Language and Locale-aware (UK + US dynamic + Future Language support)
- 4 of 4 topics use Prompt Builder (follow the same pattern)

Future Scale: What This Enables

Scenario	What to Build
Add New industry	1 ICP Knowledge article + Flow branch
New Locale + Language	Streamlined, parameter based control of the language applied in the Email Generation
New agent (e.g., CET)	Clone pattern, clone the instructions
Control Model Selection (Gemini → Claude)	Change primary Model in PT metadata
